

# TROX® TECHNIK

The art of handling air

2 June 2014

## Healthy climate

### More safety and comfort in hospitals and other highly sensitive areas

Hospitals have special requirements on the equipment and performance of ventilation and air conditioning systems. Room air contamination must be minimal, and critical limits must not be exceeded at any time. Patients are vulnerable because of poor health or restricted mobility which is why fire protection and smoke control must meet very high requirements.

Hygiene and safety are obviously important, yet energy efficiency should not be neglected. TROX has long been committed to the development of adaptable system solutions that are highly efficient and help not only to save resources but also to reduce system operating costs.
