

## BAR AND RESTAURANT

When the bar or restaurant is fully occupied, the staff as well as the ventilation system face a major challenge and must work quietly, efficiently, and without causing turbulence. Both the staff and the system need to use the time between meals to recover.

**LG linear grilles** made of light metal are aesthetic diffusers. They can, for example, be used as supply air grilles or recirculation grilles for floor induction units and provide draught-free comfort even in a full restaurant.

**The air quality sensors of the volume flow controllers** continuously measure the air quality and signal the required flow rate to the control system.

**HESCO SB slot diffusers** are available for one-way, two-way or even three-way air discharge thanks to their adjustable blades.

With their unique blade geometry, the **circular AIRNAMIC diffusers** provide an extremely quiet air discharge with optimum swirl generation. The most demanding comfort requirements can thus be met, even with very high volume flow rates.

## LINEAR GRILLES LG

27 – 270 l/s  
100 – 1.000 m<sup>3</sup>/h  
L: 400 – 1.250 mm

## SLOT DIFFUSERS HESCO SB

20 – 835 l/s  
70 – 3.000 m<sup>3</sup>/h  
L: 1.000 – 2.000 mm  
with 1 to 4 slots

## SWIRL DIFFUSERS AIRNAMIC

40 – 385 l/s  
144 – 1.386 m<sup>3</sup>/h  
Ø 400 und 600 mm
