date	rubric
01.09.2015	company

## THE FOCUS IS ON AIR MANAGEMENT

In highly sensitive areas ventilation and air conditioning have to meet specific and extremely stringent requirements. TROX clean room technology meets the highest protection and safety standards, and it is found in all types of clean rooms.

The new TROX application brochure 'Clean air - Intelligent climate and ventilation management for highly sensitive areas' deals primarily with the air distribution and air handling in clean rooms. The reliability and safety of a ventilation and air conditioning system depend on effective airflow management, i.e. on the coordinated interaction of all components.

The brochure presents the specific advantages of TROX clean room solutions. This includes complete system solutions, the benefits of one stop shopping and the resulting reduction of coordination problems, the protection of products and processes, and energy efficiency, which is as important as ever.

All this is supplemented by clean room strategies as well as descriptions of systems and units. Air filtration and air distribution are also dealt with as part of air management.
